

NATIONAL SCIENCE OLYMPIAD - David Weidinger is a national student winner in the National Science Olympiad. This test was given to four classes taught by Steve Snodgrass this past spring. The top ten scores in each group were sent in for national competition. Recognition went to 175 teams from states all over the United States and only nine students received the top award of National student winner, which David won. David was the only student from the midwest. The other eight were from New York and New Jersey. The tests were coordinated through Sherry Bingaman's gifted program.
